

If, like me, you've been too swamped by Imperial's relentless workload to have read as much *Felix* as you'd have liked, don't worry—I've got you covered. I've asked AI to read it for us.

Instead of doing my degree, I've sank far too many hours into "fine-tuning" (mildly tweaking pre-made code to produce results that just about work) two pre-trained transformers (the PT part of ChatGPT) that now live on my computer. I then fed these transformers 3 *Felix* issues from each of the 75 years and here's what I found:

Fig 1: The words most representative of the largest identified topics across 210 *Felix* articles identified by a *msmarco-distilbert-base-v3* transformer (a tiny wizard called BERT who lives in my computer)

What have been the most common topics discussed across every *Felix* article over the years? As it turns out, the four largest topics aren't exactly enlightening. In fact, they look about as profound as the words on that pointless fridge magnet you get during Freshers' Week—the one that's either lost by Day 7 or somehow still clinging to your fridge in Hammersmith.

Topic five is where BERT gets definitive: UK Politics ranks as the sixth-largest topic and the most clearly identifiable for humans. Furthermore, even though only 10.67% of *Felix*'s existence has coincided with Brexit, it has clearly made a sizeable impact, landing among the top 10-identified words for this topic. Interestingly, despite Labour being in power for ~35% of the years since 1949, *Felix* seems to associate the party more closely with this topic than the Conservatives. This likely (though not necessarily) suggests Labour gets more mentions in *Felix*.

The next clearly human-identifiable topic BERT highlights appears to be Imperial sports. From 1949 to today, sports have been central to Imperial's identity and a consistent feature, so it comes as no surprise to see it feature as such a prominent topic.

Now, instead of further prodding of the largest 48 topics BERT found us, I've attached the full list beneath.

Additionally, I used a second transformer model called ALBERT to analyse the emotional tone of each article I had stored, classifying them as joyful, sad, angry, loving, afraid, surprised, or fearful. Out of the 1,005 articles processed, 423 were classified as joyful, 352 as sad, 180 as angry, 44 as loving, 3 as surprised, and just 2 as afraid. From these, ALBERT identified the highest likelihood of membership to an emotion per article, and I've compiled the corresponding articles. Given the dataset size I did not find articles for the loving, afraid, or surprised categories—but let's focus on what I *did* find.

Fig 2: A bar chart showing the distribution of 1,005 *Felix* articles assigned to one of six emotions, [joyful, sad, angry, loving, afraid, or surprised], by a fine-tuned ALBERT-base-v2 transformer (the BERT wizard's weird cousin ALBERT)

The most joyful article across 210 *Felix* issues from 1949 to now is, in true Imperial fashion, careers related. *Felix* issue number 817 from 1989, a careers issue special featuring an article on finding your perfect job was predicted to be 99.76% joyful. Thus, perhaps what we conclude from the accompanying article snippet is that money can't buy you a 99.76% chance of happiness?

So I apologise for the following:
after a year of this I'm blatantly in not
much of a state to fight any more bat-
tles. I suspect that this man could have
easily persuaded me that it would be
best for students to dig up the library
at the start of the exam season every
year. Alarming, my predecessor wrote

Some of our halls of
residence, frankly,
I'm ashamed of...

centre: we thought we had it planned in such

battles." ALBERT scored it a 99.45% likelihood of sadness.

And as for my favourite: the angriest article. Issue 901 from 1991 featured an intense rant, earning a 97.66% likelihood of anger. If you find yourself with some time to spare, I highly recommend exploring the *Felix* archive and reading this gem, along with plenty of other brilliant pieces.

I hope this article has provided some insight into the curious content within *Felix*. As for me, I now find myself in the unfortunate position of needing to create yet another document-summarizing tool to catch up on lectures—lectures I missed while building a document-

The saddest article came in issue number 1062 from 1996: a scathing critique of the state of halls submitted by a student "*in no state to fight any more*

Dear Andy,
As probably one of your longest established readers, I have been at various times informed, amused, irritated and confused by FELIX over the years. Seldom, however, have I ever felt it necessary to contribute to your correspondence columns; but the misunderstandings and misapprehensions which pepper your editorial on the proposed changes to the careers service (FELIX edition 900 page 35) has induced me to break the habits of a lifetime.

summarizing tool. If only there was some commercially available tool capable of badly summarizing lecture notes.
